## **Electrical/Electronic**

Cryogenesis is fully adjustable and is excellent at cleaning electrical control cabinets and electrical wiring, connectors, insulators buss bars and switchgear. The dry ice cleaning process is also totally dry on its own and non-conductive.

Dry ice blasting with Cryogenesis produces dramatic results in cleaning electric motors and generators. Contaminants that gather on windings and in ventilation ducts causing unnecessary heat are effectively removed with Cryogenesis. Because the process is non-waste generating, it leaves no unwanted residue behind.
